

Process Model of Medifind

The Process Model that we will use for the project is SCRUM Agile Model.

The reasons why we chose the SCRUM are the followings:

- We have a short period of time to develop the whole process
- We expect SCRUM to be the most ideal for a small team of 4 people.
- As we are not fully confident with the Health Care Industry, we expect certain requirements to change throughout the Software Development Process

We are using Notion to create meetings and keep track of Sprint Backlogs

Example from Week4:

Software Engineering / Week 4 (0919 ~ 0926) Edited Sep 20

Week 4 (0919 ~ 0926)

Kanban Tasks 1 more... Filter Sort 🔍 ⌵ ... New

Task ...

Not Started 0	On-Going 1	Complete 5	No Status 6
+ New	Create Wireframe + New	Make notion template Evan Lim	Create Survey / Questionnaire
		Create Project Proposal (Use System Requirement Template) Bayan Asali	Create SRS
		Create Project Github Repo Moazz Asali	Technical Feasibility Study
		Set Roles & Responsibilities Muhammad Hasin	Estimate Project Size (FPA)
		Create Team Rules (Including Meeting Time) Everyone	Draw Project Development Workplan (Gantt Chart)
		+ New	Determine Software Process Model
