Technical Feasibility Study of Medifind

Users' and analysts' familiarity with the business area

The business area is the online database of medicine. The team's members have low information about the business area, and they are not experts in it.

Familiarity with technology:

The technology we are going to use:

§ Programming languages such as ReactJS, and C# ([asp.net](asp.net)). § Database Management System such as PostgreSQL. § Web languages such as HTML. Most of the team's members are familiar with JS frameworks, PostgreSQL, and C#, but are not confident with CSS.

Project Size:

It is four people for two months.

Conclusion:

The risk in this stage is high due to a low understanding of the business industry and a moderate understanding of the technology.
